

NEW BLUE FILTRATION SYSTEM

THREE STAGES. ONE COMPLETE WHOLE-PROPERTY WATER SOLUTION

Advanced Water Filtration Technology & Certified Partner Network

JOIN OUR NETWORK

OUR SYSTEM

A pre-engineered, three-stage point-of-entry water treatment platform — built for municipal and well-water properties, and designed around service parts plumbers already stock

- 1. SELF-FLUSHING PRE-FILTER**
Programmable stainless PVDF bottle filter. 5,000L auto-backwash cycle — no manual cleaning.
 - 2. 3-STAGE CONDITIONING BANK**
Standard 20"x2.5" housings: softener resin + CTO carbon + GAC. Easy-stock service parts.
 - 3. INLINE UV DISINFECTION**
60W UV lamp with automatic flow switch. Chemical-free bacteria/virus barrier.
- One point-of-entry system solves sediment, hardness, taste/odor, AND disinfection — **a single higher-ticket sale** instead of three separate ones.
 - Stage 2 cartridges are the standard 20" x 2.5" format you already stock — **no proprietary parts to source**.
 - Self-flushing Stage 1 pre-filter means **fewer sediment-related callbacks**.
 - Built-in annual UV lamp and cartridge replacement creates a **recurring service relationship** with every customer.
 - All-stainless-steel construction throughout for a **premium look** and **long service life** on the job site.

HOUSING
All Stainless Steel

PRE-FILTER CAPACITY
~5,000 L / cycle*

CARTRIDGE FORMAT
20" x 2.5" standard

UV STAGE
60W, flow-switch activated

*Typical value for this system class — confirm against specific components supplied before quoting to customers.
